

These days, its hard to escape the hype that has built up around “the cloud” or internet based computing for running your business systems.

But when it comes down to it, the main focus for most small and midsize businesses still centres around how the software will help them address their day to day challenges like managing profitability, providing great customer service and growing the business.

More than 35,000 small and midsize businesses just like yours have turned to solutions from SAP to help them do that and at <partner name> we work with many of those small and midsize businesses to help them choose and implement the right solutions that provide that foundation - solutions like SAP Business One that can be deployed in your premises or via the cloud for as little as x per user per month – around the same cost as a cup of coffee!

To learn more about how <partner name> and SAP Business One can help you to grow your business more profitably, run more efficiently and manage your customer relationships, please visit our dedicated web site at [www.partnername.com/landingpage](http://www.partnername.com/landingpage) , where you can read about successful customers that have deployed SAP Business One, view overview webinars (seminars you can watch on your computer, whenever you like), or even get a full end to end demonstration of the SAP Business One solution delivered with our Demos On Demand platform.

If you are already evaluating new solutions today, <partner name> would love to have the opportunity to discuss your requirements and show you how we can help you run better with an SAP Business One solution.

Please call us today on <partner phone no> to speak with one of our consultants and ask about our special <offer name> offer for customers that purchase and deploy a solution from <partner name> during <time period>.
